Very-Berry™

PRESENTATION

JUICY GARDEN®

ABOUT THE COMPANY

Very-Berry

Our company has been operating in the agriculture market for four years and is the pioneer in the production and supply of blueberries in Uzbekistan. Our blueberry plants are delivered from Holland and are grown locally to ensure highest quality of the product and its variety. We have purchased equipment and machinery to introduce the new technologies of intensive horticulture, raise fruit production and increase the yield of irrigated hectares. All fruits are grown following the standards of an international agricultural goods practice system. We cooperate with the largest companies in the fruit market in Turkey and Italy and invite the best professionals and foreign employees.

The company is already growing 3 hectares of blueberry plants in the outskirts of Tashkent capital; we plan to expand the production to 30 hectares within the next several years.

PRODUCTS SUPPLY

UZBEKISTAN → RUSSIA

UZBEKISTAN → CHINA

UZBEKISTAN → KOREA

Our garden, located in Central Asia, allows the continent supply of our product to two world's largest blueberry markets such as China and Korea.

Our products get delivered in the most modern and safest environment. The recorded data is automatically scaled to the full schedule for timely reporting. And also, a systematized logistics system allows you to monitor all movements of the vehicles throughout the entire journey.

OUR BENEFITS

Very-Berry

100% NATURAL

Our products can be distinguished by their natural composition and beneficial properties for your body. We do everything to grow our fruits with care for each sprout. We do not use hormones or harmful substances in the cultivation of crops. Our goal is to produce a healthy product and deliver it intact to our customers.

INNOVATIVE TECHNOLOGIES

Thanks to the innovative technologies for climate control and irrigation, our agricultural company saves resources of electricity consumption, reduces waste, and allows you to free up the company's potential. We are responsible for producing fruits and berries without using fruit growth and color stimulants. Our specialists carefully select fertilizers. Using UV filters and osmosis for irrigation eliminates the risk of crop diseases.

POLLINATION BY BEES

The use of bees for pollination is one of the essential factors in obtaining the excellent taste and quality of the fruit. The main feature of pollination of plants with the help of bees is that it is possible to eliminate the use of hormones for cultivation thanks to this pollination mechanism. Our little helpers, the Bambus bees, are hardworking and clean. This ensures the cultivation of non-GMO products.

USEFUL PROPERTIES

Very-Berry

Vision improving

Blood vessels strengthening

Strong antioxidant

High amount of vitamin C

Blood sugar regulation
